Deep Learning with Keras and TensorFlow

Learning Path

Learning Path

1

Course Introduction

2

Introduction to Deep Learning: Focuses on the basics of deep learning with a brief history

3

Artificial Neural Network (ANN): Focuses on using the perceptron for binary classification

4

Deep Neural Network (DNN): Focuses on deep neural network and its uses

Learning Path

TensorFlow: Focuses on building models using TensorFlow

5

Model Optimization and Performance Improvement: Focuses on optimization of models to get the most accurate results

6

Convolutional Neural Networks (CNN): Focuses on using deep learning in computer vision

7

Learning Path

Transfer Learning: Focuses on utilizing transfer learning to enhance performance and efficiency.

8

9

Object Detection: Focuses on object detection and its applications

Recurrent Neural Networks (RNN): Focuses on solving problems in language translation and natural language processing (NLP)

10

Learning Path

Transformer Models for NLP: Focuses on transformer models and their architecture

11

12

Getting Started with Autoencoders: Focuses on the fundamentals of Autoencoders

PyTorch: Focuses on the optimized Tensor library known as PyTorch

13

Course Components

Course Components

Hands-on exercises to practice the knowledge gained

Course end project to apply the skills acquired

Spotlight videos to reinforce the concepts learnt

Let's get started!
